Cash Forecasting

Treasury4

As a part of Cash4, our forecasting solution equips treasury teams with AI/ML-driven tools for precise and actionable cash flow management. Designed to empower decision-making, the platform integrates real-time data, automation, and advanced analytics for effective forecasting workflows and visibility across entities and accounts.

An *Advanced* Forecasting Solution

With Treasury4, treasurers and CFOs can move beyond manual processes to make faster, data-driven decisions. The platform's combination of AI, automation, and real-time insights ensures improved accuracy, efficiency, and adaptability in a volatile financial environment.

Rapid implementation and accurate insights	User-customizable forecasts	Visibility and control over model choices	Scalable for any size organization

Why Choose Treasury4?

AI/ML Powered Forecasting: Advanced algorithms analyze historical transaction data to deliver accurate and reliable forecasts.

Entity-Level Insights: Granular visibility across organizational hierarchies, including departments and bank accounts.
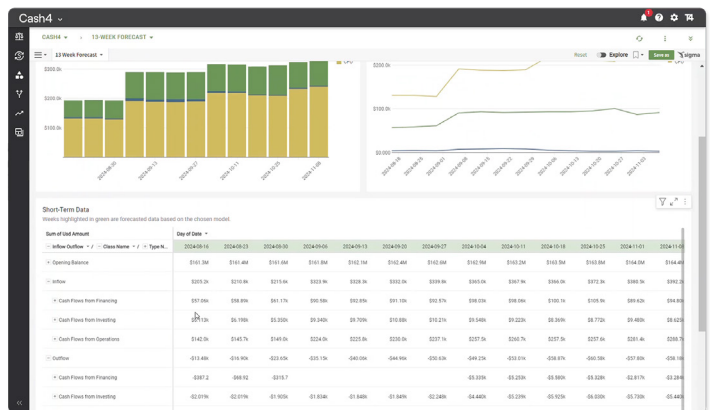

Scenario Modeling: Test multiple financial strategies with customizable scenarios for stress testing and planning by adding projected or forecasted transactions in Cash4.

Real-Time Data Integration: Connect directly to banks via APIs for timely cash flow updates.

Audit Trails: Comprehensive compliance tracking for projected, forecasted transactions, and past forecasts, ensuring a clear record of data changes and adjustments.

Custom Dashboards: Configure dashboards to track key metrics, no coding required.

Automated Transaction Categorization: Leverage Cash4's robust data management with granular, automated cash flow categorization.
